Software Engineer

Full-stack Software Engineer specializing in delivering production-grade features within the TypeScript ecosystem. An adaptable problem solver who thrives in fast-paced environments, excelling at designing maintainable, scalable solutions that balance architectural integrity with rapid delivery. Dedicated to taking end-to-end ownership—from system architecture to frontend UI/UX—consistently solving complex, ambiguous challenges with minimal oversight.

PROFESSIONAL EXPERIENCE

Software Engineer | Digital Uprising LLC, Austin, TX

12/2024 – 03/2026

- Spearheaded the full SDLC for an internal account management platform using Next.js, NestJS, Prisma, and Tailwind CSS, reducing account downtime by 90% and preserving thousands in hourly client ad spend.
- Engineered a responsive client portal UI with a reusable component-based architecture; eliminated manual OTP relay by team members – giving clients direct account access and generating ~\$7.5k in MRR.
- Optimized real-time messaging by refactoring direct database subscription polling into Server-Sent Events (SSE), eliminating redundant API calls and improving overall UI responsiveness without the overhead of WebSockets.
- Championed a Trunk-Based Development (TBD) workflow with enforced branch protection and CI/CD guardrails across dev, staging, and production, reducing release defects and elevating team engineering standards.
- Automated data lifecycle management via cron jobs to purge stale one-time password (OTP) messages, optimizing overall database performance, reducing manual intervention, and maintaining a lean and scalable data architecture.
- Led end-to-end rollout of the newly launched client portal across engineering and operations teams, coordinating cross-functional efforts, managing client onboarding and technical troubleshooting, and conducting technical interviews to hire a Senior Developer – scaling delivery capacity and elevating the team's technical standards.

Software Engineer | Formosa Plastics Corporation, Point Comfort, TX

06/2024 – 12/2024

- Redesigned and migrated department intranet from Joomla to a React-based CMS, eliminating dev dependency and empowering non-technical staff to manage content updates, reducing turnaround time from days to minutes.
- Architected secure authentication by integrating SAML with Microsoft Active Directory (AD), reducing unauthorized change request submissions by 30% and enforcing regulatory compliance across the department.
- Developed a React Native (Expo) cross-platform safety app for 500+ employees, enabling real-time personnel tracking during emergencies and reducing response times by 40%, directly improving workplace safety standards.
- Streamlined SOP document retrieval by implementing a type-to-search feature, enabling name-based searches that eliminated the need for exact document numbers and drastically reducing lookup time for daily users.

PERSONAL PROJECTS

Axiom.AI | TypeScript, Next.js, Tailwind CSS, NestJS, Prisma ORM, Supabase

2023 – 2024

- Independently architected and launched a full-stack AI-powered SaaS learning platform, taking end-to-end ownership and leveraging OpenAI to dynamically generate structured course roadmaps for rapid topic mastery.
- Engineered a multi-source pipeline linking OpenAI and YouTube API to automatically source relevant instructional videos, generate chapter summaries, and create end-of-chapter quizzes – eliminating manual content curation.

One-Send | TypeScript, NestJS, GCP, Prisma, GitHub Actions

2023 – 2024

- Architected and deployed a secure file-processing service on GCP Cloud Storage, implementing CI/CD workflows via GitHub Actions and optimizing storage strategies through iterative development and mentor-led code reviews.
- Implemented a secure file-processing pipeline with an image resizing service, normalizing cross-platform uploads (including HEIC), optimizing database resource usage and improving overall application speeds.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL (PostgreSQL)

Frameworks & Libraries: Next.js, React, React Native (Expo), NestJS, Node.js, Tailwind CSS

Backend & Cloud: Prisma ORM, Drizzle ORM, Supabase, Firebase, Google Cloud Platform (GCP), Terraform

Architecture & Practices: SDLC, Trunk-Based Development (TBD), CI/CD, System Design, Clean Architecture, Technical Interviewing, Mentorship, Stakeholder Management

EDUCATION

Certificate of Professional Full Stack Software Development, Alchemy Code Lab

Bachelor of Science (BS) in Hotel Restaurant Management, University of Houston
